

Career Objective

Data Analyst and Data Engineer with 3+ years of experience analyzing enterprise data workflows, documenting integration patterns, and supporting data governance initiatives. Skilled in SQL, Python, and ETL pipelines with experience collaborating with cross-functional teams to document processes, improve data flows, and enable reliable analytics platforms

Education

Northeastern University, Boston, MA Exp Apr 2026
Masters of Science in Information Systems (Data Engineering Track) GPA 3.72/4
Related Courses: Designing Advanced Data Architectures for Business Intelligence, Big Data Intelligence & Analytics, Cyber Security & IT Audit

University of Mumbai, Mumbai Jun 2021
Bachelors of Engineering in Information Technology
Related Courses: Artificial Intelligence, Data Mining, Cloud Computing & services, Database Management

Technical Knowledge

- **Programming:** Python (Pandas, NumPy, SQLAlchemy), SQL (PostgreSQL, MySQL), NoSQL (MongoDB), Java
- **GenAI & AI Systems:** RAG, LangChain, Prompt Engineering, OpenAI API, Claude, Pinecone, ChromaDB, LiteLLM
- **Cloud & Data Tools:** AWS (S3, EC2), Azure Data Factory, Snowflake, Airflow, Kafka, Github Actions, CI/CD, Tableau, Power BI
- **Data Modeling:** Fact-Dimension Modeling, Data governance documentation, Data Warehousing, Data Profiling, Data Lineage
- **Documentation & Workflow Tools:** Microsoft Visio, Confluence, Jira, process flow diagrams

Professional Experience

Simbex, AI Engineer, Lebanon, NH Jul 2025 - Dec 2025

- Designed & deployed enterprise-grade RAG architecture processing 10K+ document queries with optimized vector retrieval pipelines
- Built multi-stage PDF ingestion pipelines with Mistral OCR to extract structured & unstructured financial data for downstream AI apps
- Integrated commercial LLM APIs (OpenAI & Claude) to generate responses with validation layers using LLM-based evaluation agent
- Deployed cloud-native AI services using FastAPI, Apache Airflow, & AWS infrastructure to support real-time query orchestration
- Documented all system architecture, data flows, & integration patterns supporting an AI-powered document processing platform

Deloitte, Data Consultant, India Jun 2021 - Dec 2023

- **Promoted** to Consultant within a year, for winning multiple accolades & boosted stakeholder relationships providing valuable insights
- Executed enterprise-wide SAP control analytics across multiple instances to ensure compliance with ITGC & audit standards
- Developed scalable ETL pipelines with Python, PySpark, & SQL integrating structured & unstructured enterprise data for analytics
- Built interactive Tableau dashboards leveraging statistical analysis to reduce reporting turnaround time by 15%
- Designed dimensional data models using star & snowflake schemas to support financial reporting & governance frameworks
- Implemented REST APIs using FastAPI to expose AI-driven data services across business stakeholders & analytics teams
- Partnered with stakeholders & platform teams documenting workflows, integration patterns, & governance frameworks for analytics

Academic Projects

Data Integration & Business Intelligence for Crash Detection Sept 2024 - Dec 2024

- Engineered scalable data pipelines using Azure Data Factory (ADF) & Talend, to integrate multi-city traffic data in Snowflake database
- Designed Fact, Dimensional models using **E/R Studio & Alteryx** for data transformation & support structured data ingestion process
- Implemented data validation rules using **DBT** to enforce accurate **schema & data accuracy** for BI reporting in **Power BI & Tableau**
- **Orchestrated** ETL workflow, encompassing data ingestion, cleansing, transformation, & staging, to ensure reliable data for analytics

Quant Stock Price Prediction Platform Sept 2024 - Dec 2024

- Engineered feature marts from macroeconomic datasets including FRED & Fama-French to support time-series forecasting models
- Developed predictive models using GARCH, Kalman Filters, Random Forest, & XGBoost to optimize investment signal accuracy
- Applied **statistical techniques** (Markov models, stochastic analysis) to generate data-driven portfolio insights & risk indicators
- Leveraged **analytical skills** to present actionable insights & strategies to stakeholders through visualizations using Streamlit & Python

Leadership Experience

Northeastern University, Graduate Teaching Assistant – Data Science Methods & Tools Jan 2025 - April 2025

- Instructed students in Python-based ML model implementation & deployment practices; assisted with projects on real-world datasets, including feature engineering, & data visualization techniques, leading to improved student performance in applying analysis
